

INBODY[®]

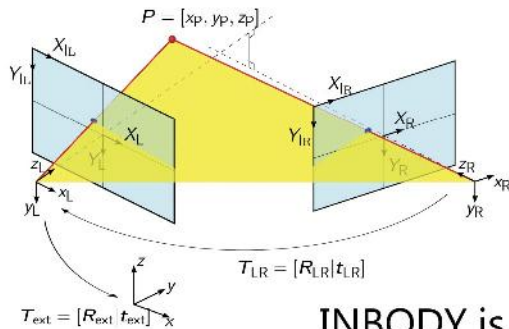

INSTANT BODY SCAN

How it works

INBODY has three main components:

- Multi micro-cameras
- Multi-thread client-server software for synchronized camera shooting
- Software for 3D data processing

INBODY is based on digital photogrammetry for 3D reconstruction

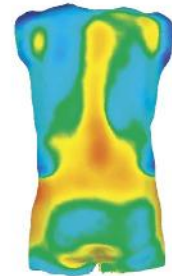

Why is INBODY unique?

INBODY is the first instant 3D body scanner for fast diagnosis and treatment of pathologies related to spinal deformities

Features

- Instant 3D body scans (< 50 ms)
- High accuracy (< 1 mm)
- High definition and textured meshes
- Photogrammetric-based 3D reconstruction
- Modular design with variable number of cameras
- Software GUI easy to use for operators

Benefits

- Non invasive digitization (no markers)
- Reduced required compliance of the patients
- Reduced time for body data acquisition by orthotists
- Improved quality of the biomedical devices
- Fast fabrication

Applications

Scoliosis

Orthoses

Prostheses

Clothes

What we offer

- Full body scanner
- Custom solutions
- Leasing
